

CineFlix AI – Advanced Movie Recommendation Platform

Project Created By: Himanshi

Project Overview

CineFlix AI is an advanced AI-powered movie recommendation and streaming platform inspired by Netflix and Disney+. It provides trending movies, official posters, trailers, AI-powered summaries, actor information, runtime details, and personalized recommendations.

Project Objectives

- Create a modern Netflix-style interface
 - Display trending movies using APIs
 - Provide official movie posters and trailers
 - Implement AI-powered movie assistant
 - Add watchlist and favourite systems
 - Improve website speed and responsiveness
-

Technologies Used

HTML5, CSS3, JavaScript, TMDB API, YouTube API, LocalStorage, and AI Chatbot Logic.

Main Features

- Netflix-style premium UI
 - Trending movie sections
 - AI chatbot advisor
 - Fast movie search system
 - Watchlist and favourites
 - Mood-based recommendations
-

AI Chatbot Features

The AI chatbot provides movie summaries, actor details, runtime information, genres, character names, ratings, and intelligent movie recommendations based on user input.

Root Cause Analysis & Fixes

The project initially faced problems related to blank screens, broken posters, search crashes, and slow rendering. These issues were fixed using asynchronous rendering, optimized API calls, early image binding, and safe validation checks.

Advanced UI Components

- Glassmorphism movie cards
 - Neon glow hover effects
 - Auto-playing trailers
 - Responsive OTT shelves
 - Smooth animations and transitions
-

API Integration

TMDB API is used for fetching movie data, posters, genres, ratings, and actor information.

Future Enhancements

Future updates may include Firebase integration, AI voice assistant, machine learning recommendations, mobile application support, subscription systems, and multilingual features.

Conclusion

CineFlix AI combines modern frontend design, API integration, AI-powered recommendations, and cinematic UI/UX to create a premium OTT streaming experience.
